Biological psychology, of biopsychology, is the application of the principles of biology to the study of mental processes and behavior, that is the study of psychology in terms of bodily mechanisms. The view that psychological processes have biological (or physiological) correlates, is the basic assumption of the whole field of biological psychology.

Gender is the range of characteristics pertaining to, and differentiating between, masculinity and femininity.Depending on the context, these characteristics may include biological sex, sex-based social structures (i.e., gender roles), or gender identity. Most cultures use a gender binary, having two genders (boys/men and girls/women); those who exist outside these groups fall under the ...

Although “biological” is often used synonymously with other words in the “Nature” column of Table 2, that practice should stop, and more accurate and precise words should be used instead. The exten to which a trait is “genetic” or “environmental” is a conceptually meaningful and precise question, although it may often be practically difficult to provide a precise answer.
