Holdout data helps evaluate your model's ability to generalize to data other than the data it was trained on. The loss on the holdout set provides a better estimate of the loss on an unseen dataset than does the loss on the training set. hyperparameter. The "knobs" that you tweak during successive runs of training a model. For example, learning rate is a

The models are demonstrated on small contrived time series problems intended to give the flavor of the type of time series problem being addressed. The chosen configuration of the models is arbitrary and not optimized for each problem; that was not the goal. This tutorial is divided into four parts; they are: Univariate LSTM Models Data Preparation

.
